ABSTRACT:

PROBLEM TO BE SOLVED: To efficiently register telephone information by permitting a transmission side to transfer a whole or a part of telephone directory information to the simple portable telephone set of an opposite party in a call state and permitting a reception side to receive the telephone information so as to store it.

SOLUTION: The transfer control part 3 of the simple portable telephone set selects and processes telephone directory information. Then, a number register request is transmitted from a transmitting part 1.

Received number register
response is received from a transmitting/receiving part 1
and telephone
directory information stored in the selected control part 3
is outputted to the
transmitting/receiving part 1 one by one so as to be
transmitted. Transmission
end is transmitted from the transmitting/ receiving part 1,
received
transmission end is received from the
transmitting/receiving part 1, transfer
end sound is outputted to a speaker 6 and a transfer end
message is outputted
to a display part 5. Or the control part 3 receives the
received number
register request from the transmitting/receiving part 1,
transmits number
register response from the transmitting/receiving part 1,
stores telephone
information to a storage part 4 with the transfer control
part 3, transmits
transmission end response from the transmitting/receiving
part 1, outputs it to
the speaker 6 and the display part 5 and displays it.
